# WORK PROGRAM OF THE ACADEMIC DISCIPLINE

" Technical work "

Field of study
Specialty
Academic degree Academic program Language of study

18 Production and Technology185 Oil and Gas Engineering andTechnologyBachelorOil and Gas Engineering and TechnologyEnglish

Prolonged: for 20 \_\_ / 20\_\_ academic year \_\_\_\_\_ (\_\_\_\_\_) "\_\_" \_\_ 20\_\_. for 20 \_\_ / 20\_\_ academic year \_\_\_\_\_ (\_\_\_\_\_) "\_\_" \_\_ 20\_\_.

> Dnipro NTU "DP" 2018

Work program of the academic discipline "Technical work" for bachelor's specialty 185 "Oil and Gas Engineering and Technology" / OV Denyschenko, SE Bartashevskyy / NTU "Dnipro Polytechnic" Department of transp. systems and techn.. - DA: NTU «DP» 2018 - 13 p.

Autors:

Denyschenko OV, assistant professor of transport systems and technologies; Bartashevskyy SE, assistant professor of transport systems and technologies;

The work program regulates:

- key goals and objectives;

- the disciplinary learning outcomes generated through the transformation of the intended learning outcomes of the degree program;

- the content of the discipline formed according to the criterion "disciplinary learning outcomes";

- the discipline program (thematic plan by different types of classes);

- distribution of the discipline workload by different types of classes;

- an algorithm for assessing the level of achievement of disciplinary learning outcomes (scales, tools, procedures and evaluation criteria);

- criteria and procedures for evaluating the academic achievements of applicants by discipline;

- the contents of the educational and methodological support of the discipline;

The work program is designed to implement a competency approach in planning an education process, delivery of the academic discipline, preparing students for control activities, controlling the implementation of educational activities, internal and external quality assurance in higher education, accreditation of degree programs within the specialty.

6.3 EVALUATION CRITERIA	8
7 TOOLS, EQUIPMENT, AND SOFTWARE	11

## **1 DISCIPLINE OBJECTIVES**

In the educational and professional programs of the Dnipro University of Technology specialty 185 "Oil and gas engineering and technology", the distribution of program learning outcomes (NRN) for the organizational forms of the educational process is done. In particular, the following learning outcomes are attributed to the discipline V2.5 "Technical work":

VR2.11	Monitor organizational performance, efficiency, perfection and prospects of
	gas and oil supply
VR2.12	Improve production technology, transportation and storage of carbohydrate
	energy and organizational activities in accordance with the requirements of
	modern production and competitive economy

**The objective of discipline** - formation of competencies to develop and implement innovative technical solutions in production.

The implementation of the objective requires transforming program learning outcomes into the disciplinary ones as well as an adequate selection of the contents of the discipline according to this criterion.

Code	Disciplinary learning outcomes (DRN)				
NRN	DRN code	content			
VR2.11	VR2.11- V2.5	perform analysis efficiency, perfection and prospects of gas and oil supply			
VR2.12	VR2.12- V2.5	develop innovative solutions in process production, transportation and storage of carbohydrate energy and organizational activities in accordance with the requirements of modern production and competitive economy			

# 2 INTENDED DISCIPLINARY LEARNING OUTCOMES

## **3 BASIC DISCIPLINES**

Subjects	The acquired learning outcomes
F1 Introduction to the	Demonstrate the ability to think abstractly, to perform analysis in
specialty	the development of technological and calculation schemes of
	elements of technical systems of production, drilling,
	transportation and storage of oil and gas.
	Demonstrate knowledge of the current state and a deep
	understanding of the role of the oil and gas industry, professional
	activity in ensuring energy security of Ukraine.
	Demonstrate skills in the use of information and communication
	technologies to solve a specific engineering problem related to the
	implementation of basic oil and gas technologies for the
	extraction, drilling, transportation and storage of oil and gas.
	Explain the general structure, interconnection and functional
	purpose of individual elements of Ukraine's hydrocarbon energy
	supply system

# 4 WORKLOAD DISTRIBUTION BY THE FORM OF EDUCATIONAL PROCESS ORGANIZATION AND TYPES OF CLASSES

	ad	Distribution by forms of education, hours					
Type of	Worklo: hours	Full-time		Part-time		Distance	
classes		Classes (C)	Individual work (IW)	Classes (C)	Individual work (IW)	Classes (C)	Individual work (IW)
lecture	70	12	58	8	62	4	66
practical	20	12	8	4	16	4	16
laboratory	-	-	-	-	-	-	-
workshops	-	-	-	-	-	-	-
TOGETHER	90	24	66	12	78	8	82

# **5 DISCIPLINE PROGRAM BY TYPES OF CLASSES**

Ciphers DRN	Types and topics of training sessions	The volume of components, <i>hours</i>
	LECTURES	70
VR2.11- V2.5	1The role of science in society. The main periods of worldinventionsThe process of creativity and psychological inertia	10
	Techniques creativity and their implementation	
	Principles of development of creative abilities	
VR2.11- V2.5	2 Methods for solving inventive problems	10
VR2.12- V2.5	Modeling Method little man (contradiction)	
	Synectics and system analysis	
	Trial and error	
	The method of brainstorming	
	Method of constructing AND-OR tree	
VR2.11- V2.5	3 Vartistnoho-functional analysis	10
VR2.12- V2.5	Intensive technology engineering creativity	
	Methods of eliminating technical contradictions	
	Inventive task and their level	
VR2.11- V2.5	4 Laws technical creativity	10
VR2.12- V2.5	The fundamental law of technical systems	
	Law completeness of the system	
	Law energy conduction system	
	Law rhythmic coordination of the system	
	Law degree increase ideal system	
	Law in transition nadsystemu	
	Law degree increase vepolnoyi system	
VR2.11- V2.5	5Algorithm of Inventive Problems	10
VR2.12- V2.5	The general structure of the algorithm	
	Special operators ARVZ	
	Operators RCHV, calves, MMCH, VA	
VR2.11- V2.5	6Methods of eliminating technical contradictions	10
VR2.12- V2.5	Physical effects and phenomena	

Ciphers DRN	Types and topics of training sessions	The volume of components, <i>hours</i>
	Standards for solving inventive problems	
	Inventive machine	
VR2.12- V2.5	7 Patent information and documentation. Patent research	10
	General Patent Information and Documentation	
	International Classifications of Industrial Property	
	Sources of patent information	
	PRACTICAL TRAINING	20
VR2.12- V2.5	1 Solving problems by means of technical creativity and laws	20
	TOTAL	90

#### **6 KNOWLEDGE PROGRESS TESTING**

Certification of student achievement is accomplished through transparent procedures based on objective criteria in accordance with the University Regulations "On Evaluation of Higher Education Applicants' Learning Outcomes".

The level of competencies achieved in relation to the expectations, identified during the control activities, reflects the real result of the student's study of the discipline.

## **6.1 GRADING SCALES**

Assessment of academic achievement of students of the Dnipro University of Technology is carried out based on a rating (100-point) and institutional grading scales. The latter is necessary (in the official absence of a national scale) to convert (transfer) grades for mobile students.

Rating	Institutional
90 100	Excellent
74 89	Good
60 73	Satisfactory
0 59	Failed

The scales of assessment of learning outcomes of the NTUDP students

Discipline credits are scored if the student has a final grade of at least 60 points. A lower grade is considered to be an academic debt that is subject to liquidation in accordance with the Regulations on the Organization of the Educational Process of NTUDP.

#### **6.2 DIAGNOSTIC TOOLS AND EVALUATION PROCEDURES**

The content of diagnostic tools is aimed at controlling the level of knowledge, skills, communication, autonomy, and responsibility of the student according to the requirements of the National Qualifications Framework (NQF) up to the 7th qualification level during the demonstration of the learning outcomes regulated by the work program.

During the control activities, the student should perform tasks focused solely on the demonstration of disciplinary learning outcomes (Section 2).

Diagnostic tools provided to students at the control activities in the form of tasks for the intermediate and final knowledge progress testing are formed by specifying the initial data and a way of demonstrating disciplinary learning outcomes.

Diagnostic tools (control tasks) for the intermediate and final knowledge progress testing are approved by the appropriate department.

Type of diagnostic tools and procedures for evaluating the intermediate and final knowledge progress testing are given below.

INTERMEDIATE CONTROL			FINAL ASSESSMENT		
training sessions	diagnostic tools	procedures	diagnostic tools	procedures	
lectures	control tasks for each topic	task during lectures		determining the average results of intermediate	
practical	control tasks for each topic	tasks during practical classes	(CCW)	controls;	
	or individual task	tasks during independent work		CCW performance during the examination at the request of the student	

Diagnostic and assessment procedures

During the intermediate control, the lectures are evaluated by determining the quality of the performance of the control specific tasks. Practical classes are assessed by the quality of the control or individual task.

If the content of a particular type of teaching activity is subordinated to several descriptors, then the integral value of the assessment may be determined by the weighting coefficients set by the lecturer.

Provided that the level of results of the intermediate controls of all types of training at least 60 points, the final control can be carried out without the student's immediate participation by determining the weighted average value of the obtained grades.

Regardless of the results of the intermediate control, every student during the final knowledge progress testing has the right to perform the CDF, which contains tasks covering key disciplinary learning outcomes.

The number of specific tasks of the CDF should be consistent with the allotted time for completion. The number of CDF options should ensure that the task is individualized.

The value of the mark for the implementation of the CDF is determined by the average evaluation of the components (specific tasks) and is final.

The integral value of the CDF performance assessment can be determined by taking into account the weighting factors established by the department for each NLC descriptor.

#### **6.3 EVALUATION CRITERIA**

The actual student learning outcomes are identified and measured against what is expected during the control activities using criteria that describe the student's actions to demonstrate the achievement of the learning outcomes.

To evaluate the performance of the control tasks during the intermediate control of lectures and practicals the assimilation factor is used as a criterion, which automatically adapts the indicator to the rating scale:

$$O_i = 100 a / m$$
,

where a - number of correct answers or significant operations performed according to the solution standard; m - the total number of questions or substantial operations of the standard.

Individual tasks and complex control works are expertly evaluated using criteria that characterize the ratio of competency requirements and evaluation indicators to a rating scale.

The content of the criteria is based on the competencies identified by the NLC for the Bachelor's level of higher education (given below).

#### General criteria for achieving learning outcomes 7th qualification for LDCs (BA)

**Integral competence** is the ability to solve complex problems and specialized practical problems in a particular area of professional activities or in a learning process that involves the use of certain theories and methods of the relevant scientific areas and characterized by complexity and conditions uncertainty.

descriptors NLC	Requirements for knowledge, communication, autonomy and responsibility	Indicator evaluation
	Knowledge	
• Conceptual knowledge acquired during the training and professional activities, including some	- A great - proper, reasonable, sensible. Measures the presence of: - conceptual knowledge; - a high degree of state ownership issues; - critical understanding of the main theories, principles, methods and concepts in education and careers	95-100
knowledge of modern	A non-gross contains mistakes or errors	90-94
achievements;	The answer is correct but has some inaccuracies	85-89
<ul> <li>critical</li> </ul>	A correct some inaccuracies but has also proved insufficient	80-84
understanding of the main theories,	The answer is correct but has some inaccuracies, not reasonable and meaningful	74-79
principles, methods,	A fragmentary	70-73
and concepts in	A student shows a fuzzy idea of the object of study	65-69
education and careers	Knowledge minimally satisfactory	60-64
	Knowledge unsatisfactory	<60
	Ability	
• solving complex problems and unforeseen problems in specialized areas of	<ul> <li>The answer describes the ability to:</li> <li>identify the problem;</li> <li>formulate hypotheses;</li> <li>solve problems;</li> </ul>	95-100
